

LIGHTSPEED EZ CLIP TROLLEY

DESIGNED FOR ZIP LINES & ENGINEERED FOR SPEED

Split-second, one-handed installation will make your guides happy and increase throughput. The LightSpeed EZ Clip Trolley's integrated carabiner pivots for improved braking and includes a locking carabiner designed specifically for zip line use.

IMPACT BRAKING COMPATIBLE

All LightSpeed trolleys are designed for impact braking with a durable front impact surface. Unlike most trolleys, both sheaves remain on the line during braking, reducing wear your equipment and line.

PIVOTING DESIGN

Our pivoting carabiner moves with a rider to keep the trolley on the cable and to create the smoothest ride. The pivoting design helps prevent the over-turning moment found in most trolleys, meaning longer lasting equipment and less wear on your line.

HIGH SPEED

Self-contained, quad, ABEC rated bearings makes these the fastest compact trolleys available. The LightSpeed EZ Clip trolley is rated for running speeds up to 75 mph and impact braking speeds up to 37 mph.

MADE TO LAST

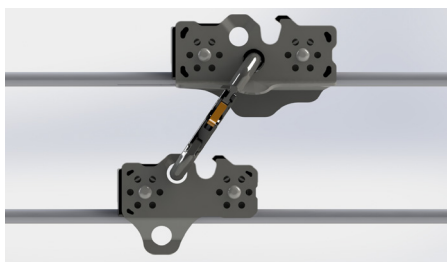

The LightSpeed EZ Clip is durable, lightweight, and made to last. They are rugged enough to withstand impact braking without unnecessary bulk.

TRIGGER CARABINER

The trigger carabiner is designed for easy, one-handed installation and can be pressed against the line itself to activate. The carabiner automatically and securely locks during use.

DUAL LINE CONFIGURATIONS

The following configuration is available from Head Rush Tech, though other trolley configurations are possible for your zip line.

EZ Clip & Micro Configuration
