

# LIGHTSPEED IMPACT TROLLEY

## DESIGNED FOR ZIP LINES & ENGINEERED FOR SPEED

The LightSpeed Impact Trolley is the premier trolley for zip lines. It's the most versatile trolley and works with large or small diameter lines. Optional accessories help create the best rider experience and higher throughput.

### HIGH SPEED

Self-contained, high-performance bearings allow for high speeds. The LightSpeed Impact trolley is rated for running speeds up to 75 mph and impact braking speeds up to 37 mph.

### MADE TO LAST

The LightSpeed Impact is a top quality trolley that is made to last. They are rugged enough to withstand impact braking without unnecessary bulk.

### LARGE SHEAVES

The sheaves work with large and small diameter lines (from 3/8 in to 3/4 in).

### IMPACT BRAKING COMPATIBLE

All LightSpeed trolleys are designed for impact braking with a durable front impact surface. Unlike most trolleys, both sheaves remain on the line during braking, reducing wear your equipment and line.

### FORWARD DESIGN

Our forward design puts a rider's weight toward the front and keeps the trolley on the line, creating the smoothest ride. The forward design prevents the over-turning moment found in most trolleys, meaning longer lasting equipment and less wear on your line.

## AVAILABILITY

The Impact Trolley is available in two colors: orange and silver.

## ACCESSORIES

T-Handle for Rider Orientation Control

Hook for Rider Retrieval
